LeetCode 485: Max Consecutive Ones

Zeyong Jin, Simon Fraser University

September 3, 2021

Here I presented a pseudo-code to solve the 485th question of LeetCode: Max Consecutive Ones.

The description of this question is that given a binary array `nums`, return the maximum number of consecutive 1's in the array.

The constranits are:

1. $1 \leq$ `nums`.length $\leq 10^5$.
2. `nums`[i] is either 0 or 1.

The pseudo-code is as follows:

Algorithm 1: Max Consecutive Ones

Input: int nums[]
Output: int ans

```
1  count ← 0;
2  result ← 0;
3  ans ← 0;
4  size ← length(nums);
5  if size = 0 then
6  |  return ans;                                   /* ans = 0 */
7  else
8  |  i ← 0;
9  |  while i < size do
10 |  |  if nums[i] == 1 then
11 |  |  |  count ← count + 1;
12 |  |  else
13 |  |  |  result ← max(result, count);
14 |  |  |  count ← 0;
15 |  |  end
16 |  end
17 |  ans ← max(result, count);
18 |  return ans;
19 end
```
